The best choices for mini multimedia, gaming and workstation system

March 31, 2009[Taipei, Taiwan] SilverStone Technology, one of the premier companies in computer chassis design, in collaboration with ZOTAC International, a leader in graphics cards and motherboards, are proud to announce that SilverStone's recently released Sugo SG05 and ZOTAC GeForce 9300-ITX Wifi are the best choices for anyone looking to build a mini multimedia, gaming or workstation system.

The design goal for SilverStone SUGO series SG05 was to make it possible for users to create a lighter and more efficient system without sacrifices to features and performance. Designed for installation with Mini-DTX and Mini-ITX motherboards, the size of SG05 is only 11.1 liters which is far smaller than any ATX chassis. The extra expansion slot allows users to install extra connectors such as fan controllers, additional I/O ports included with the motherboard, or even liquid cooling pass-through plates. This also enables SG05 to accommodate dual slot graphics card, which is a popular format for high-end 9" graphics card. Even if the graphics card used is originally a single slot design, the user can still have the option to upgrade to aftermarket dual slot cooling solution.

Harnessing the power of NVIDIA's GeForce 9300 graphics processor, the ZOTAC GeForce 9300-ITX WiFi delivers NVIDIA PureVideo HD technology for flawless high-definition Blu-ray playback and superior scaling

of standard-definition videos, and NVIDIA CUDA technology for accelerated video processing capabilities. For a high-performance platform, it is ready to take on high-definition video playback yet only occupy a 170mm x 170mm mini-ITX footprint, Hybrid SLI, PCI Express 2.0 x16, DDR2, high-definition audio and SATA 3.0Gbps technologies. Pair with the SilverStone SG05, these two class-leading products represents the premier-performance platform for any multimedia, gaming or workstation build.
